

EDES301: Introduction to Practical Electrical Engineering

Mid Semester Survey – Fall 2025

Name: Sandeep Ramlochan

How do you feel the class is going? Anything you would like me to do differently?

The class is fantastic and has been one of the most practical and engaging courses I've taken. The hands-on approach with the PocketBeagle and Python is excellent, making the concepts immediately applicable to real-world projects. I genuinely love this class; the professor is the best!

Previous topics you are having trouble with / would like to cover more?

I would appreciate a bit more depth on the low-level interaction with GPIO. While the Adafruit BBIO library makes things easy, a deeper discussion or short exercise contrasting high-level library calls versus direct register manipulation would strengthen my understanding of the BeagleBone architecture.

Topics you would like to cover in the remaining time (besides board design)?

I would love to explore setting up a basic network application on the PocketBeagle, perhaps setting up a simple web server or exploring basic network protocols for remote control or data logging.

Any other feedback you have on the course?

The blend of electrical engineering theory, hands-on hardware implementation, and software development using Python is perfect. The assignments are challenging but rewarding, and the support provided is excellent. Thank you for making this class such a great experience!
