

EDES301: Introduction to Practical Electrical Engineering

Survey - Fall 2025

Name: Sandeep Ramlochan

Major: [Electrical and Computer Engineering + Computer Science]

Year: [Sophomore]

1) What OSes do you know (check all that apply):

- Windows [X]
- MAC [X]
- Linux [X]

2) What is your primary OS:

- Windows []
- MAC [X]
- Linux []

3) Familiarity with programming languages (N/A - Don't know; 1 - Novice to 10 - Expert):

Language	Rating (1-10)
C	3
Python	8
Shell Scripting	6
Other: [MATLAB]	7

4) Familiarity with development boards (N/A - Don't know; 1 - Novice to 10 - Expert):

Development Board	Rating (1-10)
Arduino	7
MSP430/TI Development board	3
BeagleBone	4
Raspberry Pi	6
Other: [ESP32/ESP8266]	5

5) On a scale of 1 to 10, how comfortable are you soldering:

- 6 (Comfortable with basic through-hole components, some surface-mount)

6) Describe your Electrical Engineering / Software experience:

My experience includes three years of coursework in circuits, signals, and microcontrollers. On the software side, I have done work in Python for data analysis and embedded systems programming, including personal projects using GitHub.

7) During the semester, I will have additional scheduling conflicts due to my job. What is your preference / suggestion to make up classes missed due to scheduling conflicts? (E.g. recorded lectures, different class time, etc.)

My primary preference would be for recorded lectures that are posted online promptly, as this offers the greatest flexibility to review material at a time that does not conflict with work.

If the class involves hands-on lab work, an alternative suggestion would be a specific, short window (e.g., 30 minutes) at the end of the day or early the next morning for a quick recap of the lab procedure or to ask questions.
